

# INSTALLATION INSTRUCTIONS FOR WALL MOUNTED LOOP POWERED ADDRESSABLE SOUNDERS, SOUNDER STROBES AND STROBE ONLY

## MODELS

WSO-xx-N\*\* = Sounder Non Isolation  
 WSO-xx-I\*\* = Sounder Isolation

WSS-xx-N\*\* = Sounder Strobe Non Isolation  
 WSS-xx-I\*\* = Sounder Strobe Isolation

WST-xx-N\*\* = Strobe Non Isolation  
 WST-xx-I\*\* = Strobe Isolation

xx = Denotes colour  
 \*\* = Denotes Customer ID Code

## GENERAL

The range of intelligent AV devices are designed to be connected to analogue addressable fire alarm systems. These devices must only be connected to control panels that use a compatible proprietary analogue addressable communication protocol. These devices receive their power from the loop, and can be controlled via the communication protocol(s).

The sounders have three volume levels and 32 tone sets. Models (WSO-xx-I\*\*, WSS-xx-I\*\*, WST-xx-I\*\*) containing the character 'I' prior to the Customer ID code include in built isolation providing short circuit protection of the loop. Up to 159 addresses are available. (consult the panel instructions to confirm compatibility) These are selected via the two rotary switches. The 'tens' digits go from 0 to 15 and the 'units' from 0 to 9.

*Note: if the control equipment is not capable of taking more than 99 module addresses, a fault condition will be generated for every address over 99.*

SPECIFICATIONS	WSO-xx-*** Sounder	WSS-xx-*** Sounder Strobe	WST-xx-I** Strobe
Signaling Line Supply Voltage (non isolation)	15 to 32VDC (24VDC typical)		
Signaling Line Supply Voltage (isolation)	15 to 29VDC (24VDC typical)		
Max current consumption (non isolation) (High Volume Tone 8 @24V)	5.58mA	8.86mA	N/A
Max current consumption (isolation) (High Volume Tone 8 @24V)	5.77mA	9.05mA	N/A
Sound Output to EN54-3 (High Volume Tone 8 @24V)	95dB(A) ± 3dB		N/A
Beacon flash rate	N/A	1Hz	1Hz
Max current consumption (non isolation) WST-xx-***	N/A	N/A	3.28mA
Max current consumption (isolation) WST-xx-***	N/A	N/A	3.47mA
Quiescent Current	450uA		

Operating temperature range -25 to +70°C  
 Relative humidity up to 93% (± 3%) - non condensing  
 Terminal Size 2.5mm<sup>2</sup> - maximum  
 For isolator specification refer to document SP11-2848 available on request

## TERMINAL CONNECTIONS

## VOLUME SETTINGS

Volume setting is selected by SW6 and SW7 of the 8 way DIP switch. The appropriate tone set is selected by SW1 to SW5 of the 8 way DIP switch (see table 1). The 2nd stage tone (related to the 1st stage tone) is controlled by the fire panel via the protocol.

SW6	SW7	Volume Setting
OFF	OFF	HIGH
OFF	ON	MEDIUM
ON	OFF	LOW
ON	ON	LOW

## BASES/IP RATING

B501AP Base(IP 21C)

Deep Base(IP 44)

Waterproof Base(IP 65)

If the waterproof option is required then the wall gasket must be fitted behind the deep base, and the sealing o-ring fitted after attaching the low profile base.

## INSTALLATION

Affix B501AP base to a suitably flat wall. Terminate the cable to the appropriate terminals. For surface mount wiring the cable can enter the B501AP base via the breakouts provided. Select the appropriate Tone and Volume settings via the DIP switch. Locate the main assembly on to the base by rotating until it locks into place.

## CONTINUITY SPRING

The B501AP base incorporates a continuity spring between terminals 2 and 4. This allows the continuity of the field wiring to be checked without the need for the device to be present. Inserting the device will disengage the spring. Removing the device will close the loop.

## ANTI TAMPER LOCK

The B501AP base also includes a tamper resistant feature that when activated prevents removal of the unit without the use of a special tool. This method is consistent with the anti tamper feature across all devices using this base. This prevents the device being turned to enable its release.

Table 1 - VERSION 8B

DIP setting O=Off/1=On SW 1,2,3,4,5	No	Pattern	Nominal Frequency	Typical consumption (mA)			Switching Frequency	Description	Market	Standard	2nd Stage Tone
				(WSO-WSS) High	(WSO-WSS) Medium	(WSO-WSS) Low

**DIMENSIONS**  
Strobe

Sounder/SounderStrobe

**ADDRESS SETTING**

To set one of the 159 available addresses for the device use the two rotary switches located either side of the dip switch unit. The 'tens' digits go from 0 to 15 and the 'units' from 0 to 9.

Example A (Address setting 98)

Example B (Address setting 108)

Note:- For Isolated variants add 0.19mA to high, medium, low values above.

Sounder Output data, in accordance with EN54-3, is available on Document Ref: D 1022.  
Note: For CPD Data on all relevant devices please request D974
